

St Ives Law – Phase 1

Streamlined Intake & Clio Automation

Prepared by **LexOps**

Prepared June 2026

PAIN POINTS

Every firm has a handful of processes everyone quietly accepts as "just how it's done." For St Ives Law, two in particular are creating downstream cost and risk today.

INCOMPLETE LEAP → CLIO MIGRATION

- X An unsuccessful migration from Leap to Clio has left firm knowledge scattered across fragmented data sources
- X Critical matter and client information sits outside a single system of record, unsecured and hard to trust
- X Fee earners can't rely on Clio as the source of truth, undermining every workflow built on top of it

FRAGMENTED, MANUAL INTAKE

- X Client-specific context and knowledge is lost between channels and handoffs, rather than captured once
- X Unbillable hours are absorbed in manual matter entry, and the same data is re-keyed again and again
- X First draft wills are written from scratch each time

Left unaddressed, these issues compound as volume grows — more lost context, more unbillable administration, and more risk sitting outside a secure, structured system. The phase that follows is designed to remove them at the root.

EXECUTIVE SUMMARY

OBJECTIVE

Establish the underlying infrastructure for further AI and automation implementations in subsequent phases:

- Streamline and standardize St Ives Law's full funnel intake process, ensure structured matter creation on Clio, and accelerate first draft will generation
- Ensure quick and easy migration of existing matters into Clio from local file storage with zero risk, zero error, and minimal lead time

THIS PHASE FOCUSES EXCLUSIVELY ON

- Local agent deployment into local file storage systems to export matters to Clio
- Intake process re-design
- Clio configuration for automated matter setup
- Automated first draft will generation

This phase is designed to reduce administrative load, improve intake consistency, accelerate first draft will generation, and ensure clean matter setup.

ADDITIONAL SCOPE FOR PHASE 02 FROM DISCOVERY

- Automated email follow-ups for existing clients on pending matters
- Automated weekly summaries for external stakeholders (i.e. barristers)
- AI-enabled document retrieval from local file storage systems and Clio

These builds, along with others, can be scoped out separately upon Phase 01 completion.

CLIENT IMPACT

We rebuild the workflows your firm has learned to live with. Here is what that looked like for a firm much like St Ives Law – and a preview of what we have designed this proposal to do for you.

ESTATE PLANNING AUTOMATION – APAC LAW FIRM

CONTEXT:

A boutique Australian estate-planning firm – wills, powers of attorney, enduring guardianship – running a high intake volume with a small team. The kind of practice where every hour a solicitor spends on admin is an hour not spent on clients.

PROBLEM:

A 328-field questionnaire, completed on paper and PDF, then re-keyed by hand into the case management system – 45 to 90 minutes of solicitor time on every new client, transcription errors baked in. Exactly the kind of process a firm quietly accepts as "just how it's done."

SOLUTION:

Lex Ops mapped the workflow and rebuilt it as a system: a guided four-part online intake form feeding an orchestration of 162 steps. On submission it authenticates the client, creates the contact, routes by engagement type, and builds the entire matter – mapping all 328 fields, linking executors, beneficiaries, attorneys, and guardians, and filing supporting documents automatically. 328 fields to one click.

IMPACT:

- ✓ Up to 90 minutes of manual data entry eliminated on every intake
- ✓ All 328 fields mapped automatically – zero re-keying, zero transcription errors
- ✓ Solicitor time redirected from data entry back to billable legal work

This proposal applies the same playbook to St Ives Law – built around your intake, your matter types, and your migration into Clio.

ABOUT LEX OPS & TEAMS SQUARED

We understand how an entire law firm operates, end to end – because we have studied it. We have mapped the full lifecycle, from first enquiry through intake, matter creation, advice and engagement, delivery, billing, and reporting. That deep operational knowledge is exactly what lets us build real, complex, end-to-end custom workflows for your firm – not generic templates bolted on, but systems that match how legal work actually flows.

Think of us as AI and automation systems integrators, built specifically for law firms. We connect your case management system, documents, and intake into one coherent operating system. And because Lex Ops is a Teams Squared product, that work is backed by our parent company's delivery capacity, talent network, and operating experience.

TEAMS SQUARED

Teams Squared helps global companies reach operational efficiency through remote teams, automation workflows, and consulting support. We focus on removing manual handoffs, clarifying ownership, and putting reporting in place so leaders can see what is happening without status updates. We built Teams Squared to connect talent with teams that need capacity, keeping delivery standards high and operations simple. **That approach now extends beyond hiring into operational improvement, process redesign, and workflow automation.**

COMPANY SNAPSHOT & LEADERSHIP

COMPANY SNAPSHOT

HEADQUARTERS

Singapore

TRACK RECORD

Over 100 hires placed across legal, HR, tech, and operations functions

MARKET PRESENCE

Philippines, Malaysia, Sri Lanka, Australia, UK, US, India, Nepal, South Africa, Ukraine, Pakistan, New Zealand

MISSION

Help organisations access offshore talent in a compliant and cost efficient way, and support clients to run better operating systems as they grow

LEADERSHIP

Abdurahman Haroon
Co-founder and CEO

Amresh Selvaskandan
Co-Founder and COO

TESTIMONIALS & DELIVERY FOOTPRINT

TESTIMONIALS

"I've had the pleasure of working with Teams Squared for virtual lawyer and administrative services, and they've been fantastic. The communication has been excellent from start to finish, always clear, prompt, and professional. Their team is incredibly responsive and attentive, making the entire process seamless and stress-free. Highly recommend their services."

Bianca Parslow, Head of Finance and Smarter Solutions, Aspire Lawyers

"Partnering with Teams Squared was a transformative experience for Betts Law Co. Their exceptional service and the unparalleled quality of talent they provided exceeded my expectations. The team member we onboarded through them not only brought remarkable skills but also integrated seamlessly with our firm's culture."

Donald Betts, Managing Principal, Betts Law Co

DELIVERY FOOTPRINT

Singapore headquarters, with teams across Sri Lanka, the Philippines, Pakistan, India, Nepal, and South Africa.

SCOPE OF WORK

DELIVERABLE A — CLIO MIGRATION OF LOCAL FILES

A local agent deployed into St Ives Law's file storage safely exports existing matters into Clio with zero risk, zero error, and minimal lead time. The agent follows a controlled, read-then-write process:

- 1 DISCOVER & INVENTORY**
Scan local file storage to catalogue every existing matter, its documents, and folder structure, producing a complete inventory of what will be migrated.
- 2 MAP & CLASSIFY**
Map each matter and document to the correct Clio matter type and fields, flagging anything ambiguous for human review before any data is written.
- 3 VALIDATE (DRY RUN)**
Run a non-destructive validation pass to confirm completeness and data integrity, surfacing any gaps for sign-off before migration begins.
- 4 MIGRATE**
Create matters in Clio and upload documents via the Clio API, preserving structure, metadata, and contact roles exactly as held locally.
- 5 RECONCILE & VERIFY**
Confirm record counts and documents match the source and deliver a reconciliation report, so the migration can be signed off with confidence.

SCOPE OF WORK (CONTINUED)

DELIVERABLE B – INTAKE & MATTER AUTOMATION

- 1

UNIFIED INTAKE STRUCTURE

Redesign and standardize intake across the firm’s different sources and feed it into Clio as a single structured data flow. This ensures consistent intake capture regardless of source.
- 2

CLIO CONFIGURATION & MATTER AUTOMATION

Configure Clio to automatically create and structure matters based on intake classification. This includes internal configuration to ensure correct matter setup and data consistency from day one.
- 3

AUTOMATED FIRST DRAFT WILL GENERATION

Based on the captured matter data, generate first-draft Wills from controlled templates within Clio. The system produces draft-ready documents for lawyer review, reducing manual drafting time and improving consistency.

INVESTMENT SUMMARY (AUD)

DESCRIPTION	AMOUNT (AUD)
Total project investment	\$5,000

OPTIONAL – MAINTENANCE PLAN

Following implementation, St Ives Law may elect to retain LexOps on an ongoing basis to keep the system running smoothly and evolving with your needs. This plan covers two core areas:

- 1

SYSTEM MONITORING
Regular checks to ensure all automations and integrations are running properly, preventing issues before they affect your operations.
 - Monitoring intake automations
 - Checking form submissions and data mapping
 - Troubleshooting any automation failures
- 2

SMALL IMPROVEMENTS & CHANGES
As your team uses the system, small adjustments will be needed. This ensures the system evolves with your practice rather than becoming static.
 - Minor workflow tweaks
 - Intake form changes
 - Adjustments to Will templates
 - Small process optimizations

A full description of the terms and conditions governing this maintenance arrangement is available in the dedicated Terms & Conditions document provided separately.

INVESTMENT SUMMARY (AUD)

DESCRIPTION	AMOUNT (AUD)
Monthly maintenance retainer (4-8 hours included)	\$500 / month
Additional hours exceeding monthly allocation	\$60 / hour
